

Let's do an experiment

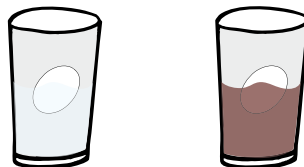

The experiment will be carried out for two days.

You will need:

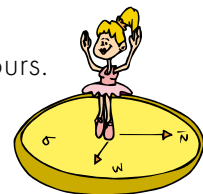

1. Two white eggs (you will have to boil them before the experiment).
2. Two transparent plastic cups.
3. A can of Coca-Cola.
4. A bottle of water.

Instructions:

1. With the children, put one egg into one of the cups and fill it up with water.
2. Put the other egg into another cup and fill it with Coca-Cola.

3. Ask children what they think will happen to the eggs.
4. Take note of their answers and leave the eggs in the cups for 24 hours.

The next day... you will need: a toothbrush and some toothpaste.

1. Take the eggs out of the cups.
2. Ask children what happened to the eggs.
(The one in water will be OK; the one in Coke will be brown and coated with a sugary, sticky layer).
3. Tell the children you are going to do a magic trick!
4. Take the toothbrush and some toothpaste and brush the egg.
5. Magic! The layer disappears!
6. Tell children that brushing their teeth is very important for their health.
